

Future Research

Nature's Nurse, Inc. is committed to be a leader in research within the nutritional supplement industry. Already we exceed the standard for DSHEA and the USDA for quality, testing, and packaging. In three separate initial clinic studies, the latest conducted by independent MD, Dr. Scott Carroll, 79% of the time, full resolution of nasal and bronchial symptoms related to the common cold are achieved within 12-48 hours (considerably more effective than most pharmaceutical products). Steps are being taken for an independent double-blind study (50% of the participants are given a placebo) — a similar type of test used in the western medicine model for pharmaceutical products to scientifically prove what the Indigenous Fijians have known for hundreds of years.
