

## Where we are now

Nature's Nurse, Inc. is marketing and selling through like-minded groups of people such as yours with up to 40% of proceeds going to the Fijians, fund raisers, and other charitable outreaches.

We've specifically chosen the method in order to eliminate middlemen so that the company can be driven by generosity (new business concept) &ndash; help families be healthy, return significant resources back to Fiji, and to help children and others in the US and around the world. You can purchase it as an individual, as a group, and for fundraising. Doing so helps lots of people in positive ways.

Scientifically and clinically, results of initial clinical tests with Fijian Red Mangrove<sup>®</sup> significantly outperform the standard for an "effective drug" (see Research). The product exceeds all requirements for nutritional supplements as established by DSHEA (herbal legislation), the USDA (governing body), and FDA (affiliated indirectly to the USDA relative to nutritional supplements). The Chief Pharmacist of Fiji within the Ministry of Health warrants the safety of Rhizophora Mangle (Fijian Red Mangrove) for human consumption.
